DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

Claim 22 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The claim recites a laser that includes the element of either claim 18 or 19. The claim does not further limit the structure of either of these claims.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7 and 18-21, drawn to a semiconductor laser element having at least one groove therein, said groove containing a metal, classified in class 372, subclass 44.
- II. Claims 8-17 and 22, drawn to a semiconductor laser including a laser element and having a heatsink and a passage for a cooling medium located therein, classified in class 372, subclass 34. Note that though claim 22 depends from claims in Group I, it is deemed to be part of Group II as it appears it should be re-written in independent form in light of the claim objection above.

Art Unit: 2828

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the groove is not necessarily in the combination. The subcombination has separate utility such as any application where a laser may be used. The groove of the subcombination may be for providing an electrical connection through the substrate, so that the substrate may be made of non-conductive materials.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
